

Modern co-working space secured by Antron Security and Inner Range

Overview

Montacute Yards, a cutting-edge office and co-working space located in the heart of Shoreditch, epitomises modern work environments designed for creativity, collaboration, and productivity. Purchased by a London-based real estate investment and development firm, Montacute Yards offers a variety of amenities including tiered terraces, mezzanines, reading rooms, and a state-of-the-art gym.

Challenge

As a bustling hub for professionals, Montacute Yards experiences a high volume of daily foot traffic from staff and visitors. The primary challenge was to implement a robust security system that could manage access across various levels while maintaining a secure environment for all occupants.

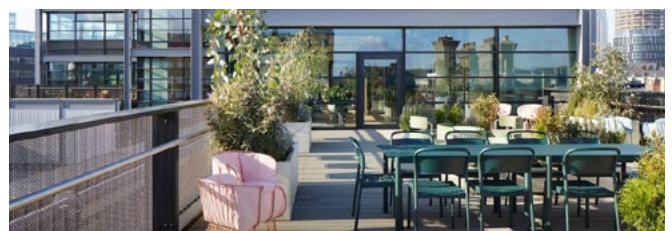

Solution Provider

Antron Security was chosen to equip Montacute Yards with an advanced security solution tailored to the needs of a dynamic co-working space. They selected Inner Range technology to secure common areas and adapted the system to meet the specific requirements of the co-working businesses within the building, serving approximately 1,200 users.

Solution

The core of the security setup is the Inner Range system, featuring Integrity access control software. This system is centrally managed from the landlord control room, allowing security personnel to oversee building and perimeter security efficiently. Key features of Integrity include:

- **Comprehensive Access Control:** Administered via a user-friendly interface, it allows for detailed report generation, user group and profile setup, and provides a building-wide graphical map displaying all access areas and monitored areas.
- **Integration Capabilities:** Integrity is recognised for its ability to seamlessly integrate with an array of third-party security products, enhancing its functionality and scalability.
- **Lift Control:** The software extends its capabilities to elevator management, controlling four passenger and one goods lift, restricting floor access based on user credentials.

Additional enhancements installed by Antron Security include:

- **IP-Based Access Control System:** A fully integrated system that combines wired and wireless locking mechanisms.
- **Cloud-Hosted Solutions:** Ensuring flexible and remote management capabilities.
- **Emergency Lockdown Facility:** To quickly secure the building in crisis situations.
- **Integrated CCTV with Thermal Imaging:** For enhanced surveillance and temperature screening.
- **Custom IP Entryphone System:** Featuring bespoke DDA-compliant entry panels.
- **Comprehensive Intruder Alarm System:** To deter and detect unauthorised access effectively.

“Montacute Yards was a fantastic project – the site itself incorporates innovative features and contemporary designs that make it attractive to visitors and staff. And in the spirit of forward-thinking, we ensured that the security of the site reflected that, using the best-in-class safety solutions,”
 said Jamie Crane, Commercial Director, Antron Security.

Impact

The integration of Inner Range’s technology has transformed Montacute Yards into a fortress of innovation and security. The occupants enjoy not only premium workspace amenities and collaborative environments but also peace of mind, knowing they are protected by a state-of-the-art security system. This case study serves as a benchmark for secure, modern co-working spaces globally.

Conclusion

Antron Security’s implementation of Inner Range’s advanced security solutions exemplifies the potential of technology to create safe, efficient, and highly functional work environments tailored to the needs of contemporary professionals and businesses. Montacute Yards stands as a testament to the effectiveness of thoughtful and comprehensive security planning in enhancing workspace utility and safety.
